1. System Overview & Dashboard

Welcome to SCM ERP! The Dashboard is your primary workspace window and control room. It consolidates metrics from all other business modules in real-time, allowing operators to monitor system health at a glance.

Workflow Process Diagram:

Step-by-Step Operator Guide:

- Log into the system to load the main dashboard.
- Scan the top numerical tiles to check overall performance.
- Check the warnings panel for critical tasks (e.g. low inventory items).

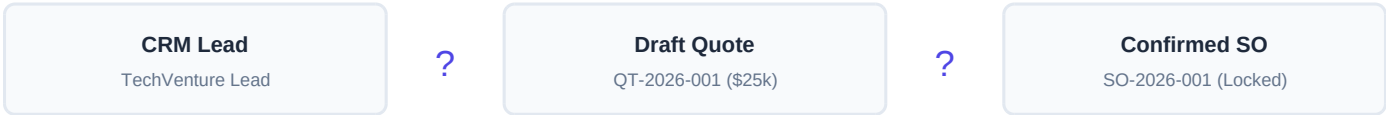

Real-Life Transactional Example (TechVenture Solutions Inc.):

Metric Category	Real-Life Parameter	Current Value	Status Indicator
Cash & Liquidity	Primary Bank Reserves	\$150,000.00	Healthy
Accounts Receivable	Outstanding Customer Invoices	\$29,500.00	Pending Payment
Accounts Payable	Outstanding Supplier Bills	\$3,000.00	Due in 15 Days
Low Stock Warning	Raw Material RM-STL-42U	2 Units	Critical Alert (Safety: 5)

2. CRM Leads & Quotations

The Customer Relationship Management (CRM) module tracks prospective client conversations and converts pricing quotes to confirmed sales contracts. In our real-life scenario, TechVenture Solutions Inc. inquires about purchasing high-grade Enterprise Server Racks.

Workflow Process Diagram:

Step-by-Step Operator Guide:

- Open 'CRM Leads' from the sidebar and click 'Add Lead'. Fill in client details for TechVenture Solutions Inc.
- Create a Quotation from the lead card, selecting the target product 'Enterprise Server Racks' (SKU: FG-SRV-42U).
- Set price, tax rate (GST 18%), and save. Once approved by the customer, click 'Convert to Sales Order'.

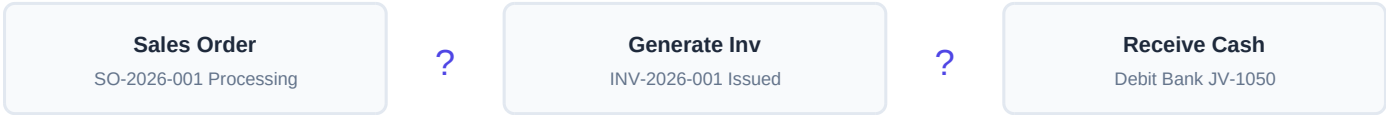

Real-Life Transactional Example (TechVenture Solutions Inc.):

LEAD REFERENCE	PROSPECT CUSTOMER	TARGET SKU	QTY REQUEST	QUOTED PRICE	TOTAL TAX (18%)
LD-2026-081	TechVenture Solutions Inc.	FG-SRV-42U	10 Units	\$2,500.00	\$4,500.00

3. Sales & Customer Management

Oversee customer directory records, Sales Orders (SO), invoice billing, and customer product return requests (RMA). Converting the quote creates Sales Order SO-2026-001, which locks the inventory allocation.

Workflow Process Diagram:

Step-by-Step Operator Guide:

- Navigate to Sales -> Sales Orders. Check that SO-2026-001 is generated in draft.
- Verify TechVenture Solutions Inc.'s shipping address and update the order status to 'processing'.
- Click 'Generate Invoice' to issue invoice INV-2026-001. Mark as paid when payments arrive.

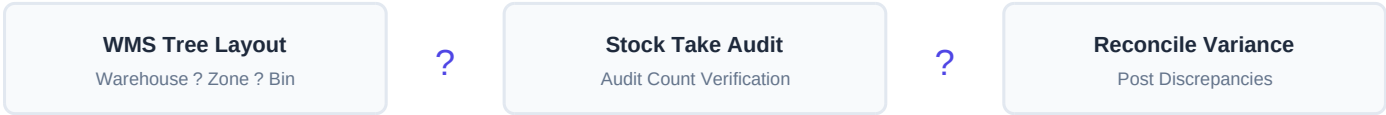

Real-Life Transactional Example (TechVenture Solutions Inc.):

ORDER ID	INVOICE ID	CLIENT NAME	TOTAL BILLABLE	PAYMENT STATUS	RMA LOG
SO-2026-001	INV-2026-001	TechVenture Solutions	\$29,500.00	Unpaid (Pending)	RMA-2026-001 (Bezel)

4. Inventory & Warehouse Management (WMS)

The Warehouse Management System (WMS) tracks real-time quantities of goods located inside physical bins, racks, zones, and warehouses. Items are organized in a strict logical tree to allow operators to find stock instantly.

Workflow Process Diagram:

Step-by-Step Operator Guide:

- Open 'Inventory' -> 'Warehouses'. Review locations: Warehouse WH-01, Zone Z-RAW, Rack R-03, Bin A02-R2-S1.
- Use internal transfer to move components from receiving to assembly bins.
- Perform a physical Stock Take. If a discrepancy is found, submit counts to auto-adjust.

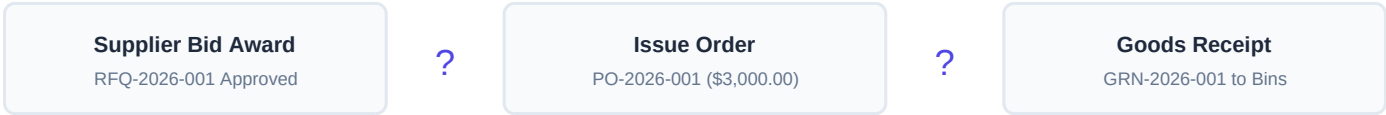

Real-Life Transactional Example (TechVenture Solutions Inc.):

WAREHOUSE ID	ZONE NAME	RACK ID	BIN ADDRESS	SKU STORED	SYSTEM STOCK	AUDIT VARIANCE
WH-01 (Central)	Z-RAW (Raw Materials)	R-03	A02-R2-S1	RM-STL-42U	12 Units	-2 (Adjusted)

5. Procurement (RFQs, POs, & GRN)

Procurement manages supplier listings, bid tracking (RFQs), purchase orders (PO), and goods receiving (GRN). This initiates the flow by securing the raw steel frames required to assemble the server racks.

Workflow Process Diagram:

Step-by-Step Operator Guide:

- Create Supplier RFQ RFQ-2026-001. Send to Global Iron & Steel Co.
- Accept their quote and generate PO-2026-001 for 10 units of RM-STL-42U.
- When delivery arrives, click 'Receive Goods' to create GRN-2026-001, moving stock to bin A02-R2-S1.

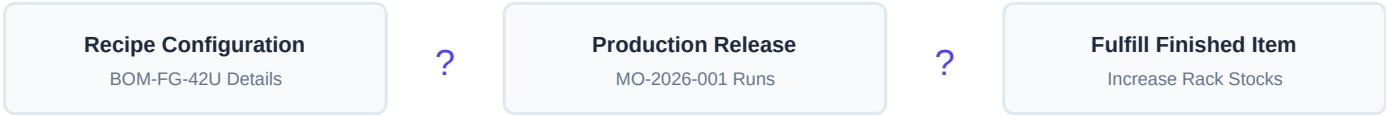

Real-Life Transactional Example (TechVenture Solutions Inc.):

RFQ REFERENCE	PO REFERENCE	AWARDED SUPPLIER	SKU ORDERED	QTY RECEIVED	GRN ID
RFQ-2026-001	PO-2026-001	Global Iron & Steel Co.	RM-STL-42U	10 Units	GRN-2026-001

6. Manufacturing (BOM & MO)

Set up product recipes (Bills of Materials) and execute Manufacturing Orders (MO) to assemble raw components into finished items. Completed MOs auto-consume component items and add finished products to inventory.

Workflow Process Diagram:

Step-by-Step Operator Guide:

- Open Manufacturing -> Bills of Materials (BOM). Create recipe for finished product FG-SRV-42U.
- Go to Manufacturing Orders (MO). Click 'New Order', choose BOM and quantity 10, then confirm.
- Progress the MO status to 'Produce'. Upon completion, select destination bin A02-R3-S2.

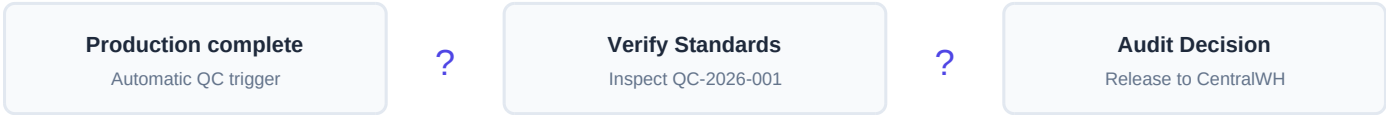

Real-Life Transactional Example (TechVenture Solutions Inc.):

BOM RECIPE ID	MANUFACTURING MO	FINISHED SKU	TARGET QTY	RAW MATERIAL DEBITS	FINISHED GOODS CREDITS
BOM-FG-42U	MO-2026-001	FG-SRV-42U	10 Units	10x RM-STL-42U	10x FG-SRV-42U

7. Quality Control & Assurance (QC)

Prevents defective inventory from being shipped to customers or placed into active warehouse storage. All incoming items (GRN) and completed assembly runs (MO) trigger pending QC audits.

Workflow Process Diagram:

Step-by-Step Operator Guide:

- Go to the Quality Audits dashboard. Locate the pending check triggered by MO-2026-001.
- Click 'Audit Release'. Review inspection points (dimensions, rivets, grounding).
- Register the verdict as 'Passed'. This releases the 10 units to active inventory.

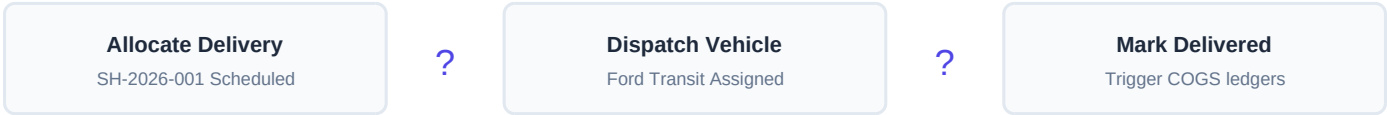

Real-Life Transactional Example (TechVenture Solutions Inc.):

Audit Reference	Origin Document	Audited SKU	Inspector Name	QC Verdict	Reconciled Date
QC-2026-001	MO-2026-001	FG-SRV-42U	Alice Smith	Passed (Released)	2026-06-07

8. Fleet, Shipments, & Logistics

Coordinates transport operations, vehicle profiles, fuel tracking, and driver dispatch routines. The logistics engine manages shipment schedules and posts ledger transactions upon completion.

Workflow Process Diagram:

Step-by-Step Operator Guide:

- Open Logistics -> Dispatch Board. Check pending sales shipment SH-2026-001.
- Drag and assign the shipment to Driver John Doe and Delivery Van V-100.
- Mark shipment as 'Delivered' upon client arrival to trigger COGS ledger entries.

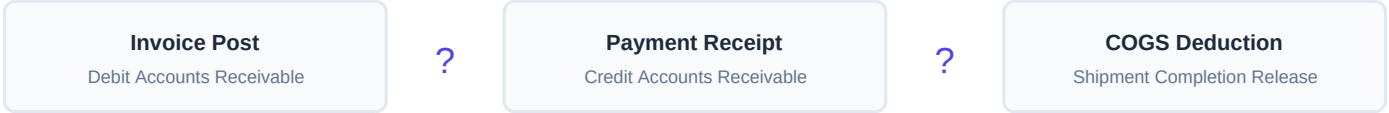

Real-Life Transactional Example (TechVenture Solutions Inc.):

SHIPMENT ID	DRIVER NAME	VEHICLE ID	DESTINATION ROUTE	DELIVERY STATUS	COGS DEBIT
SH-2026-001	John Doe	V-100 (Ford Transit)	WH-01 to TechVenture HQ	Delivered	\$6,500.00

9. Financial Accounting & Chart of Accounts

Provides compliance-ready ledger reporting. SCM ERP automatically generates standard double-entry journal postings as business actions occur, ensuring financial integrity.

Workflow Process Diagram:

Step-by-Step Operator Guide:

- Navigate to Finance -> General Ledger to view the double-entry transactions log.
- Open Chart of Accounts. Observe assets incremented and liabilities cleared.
- Use filters to review balance sheets and verify that debits equal credits.

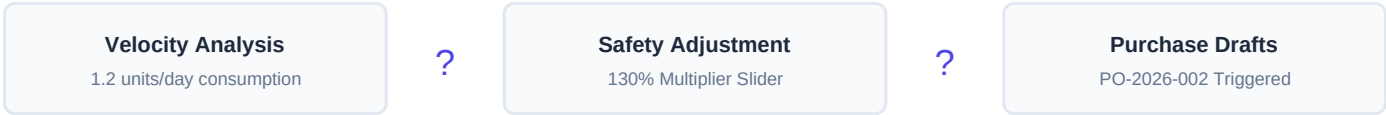

Real-Life Transactional Example (TechVenture Solutions Inc.):

JOURNAL ID	POSTING DATE	ACCOUNT NAME	DEBIT AMOUNT	CREDIT AMOUNT	TRANSACTION DESCRIPTION
JV-2026-1049	2026-06-07	Accounts Receivable	\$29,500.00	\$0.00	Invoice INV-2026-001 TechVenture
JV-2026-1049	2026-06-07	Sales Revenue	\$0.00	\$25,000.00	Invoice INV-2026-001 TechVenture
JV-2026-1049	2026-06-07	GST Liabilities	\$0.00	\$4,500.00	Invoice INV-2026-001 TechVenture
JV-2026-1050	2026-06-07	Cash & Bank	\$29,500.00	\$0.00	Payment received from TechVenture
JV-2026-1050	2026-06-07	Accounts Receivable	\$0.00	\$29,500.00	Payment received from TechVenture
JV-2026-1051	2026-06-07	Cost of Goods Sold	\$6,500.00	\$0.00	COGS for shipment SH-2026-001
JV-2026-1051	2026-06-07	Finished Goods Inventory	\$0.00	\$6,500.00	Inventory deduction for SH-2026-001

10. Enterprise AI & Demand Forecasting

Optimize stock levels and prevent cash flow blocks with automated predictive demand algorithms. By calculating daily average usage, the forecasting module alerts staff and generates replenishment suggestions.

Workflow Process Diagram:

Step-by-Step Operator Guide:

- Open AI Forecasting. Review consumption velocity calculations.
- Adjust safety stock multiplier (e.g. 130%) to simulate peak seasons.
- Click 'Apply Safety Settings' and then 'Bulk Auto-Generate POs' to create drafts.

Real-Life Transactional Example (TechVenture Solutions Inc.):

PRODUCT SKU	AVG DAILY VELOCITY	LEAD TIME (DAYS)	SAFETY MULTIPLIER	CURRENT STOCK LEVEL	REPLENISH PO
RM-STL-42U	1.2 Units	3 Days	130% (Seasonality)	2 Units (Alert)	PO-2026-002 (Draft)
